

Whole school skips to low energy beat

Towards Class A - Shining examples

...are everywhere and in a town near you...

Legacy

The 9th Primary School, Egaleo has maximised its results under Display aided by experience garnered from a long list of successful environmental projects

It has built working relationships with networks such as the Hellenic Society and has strong links with local businesses and with the Egaleo Municipality

A central tenet to the School's approach is to take up a new environmental challenge every year

Cooperation

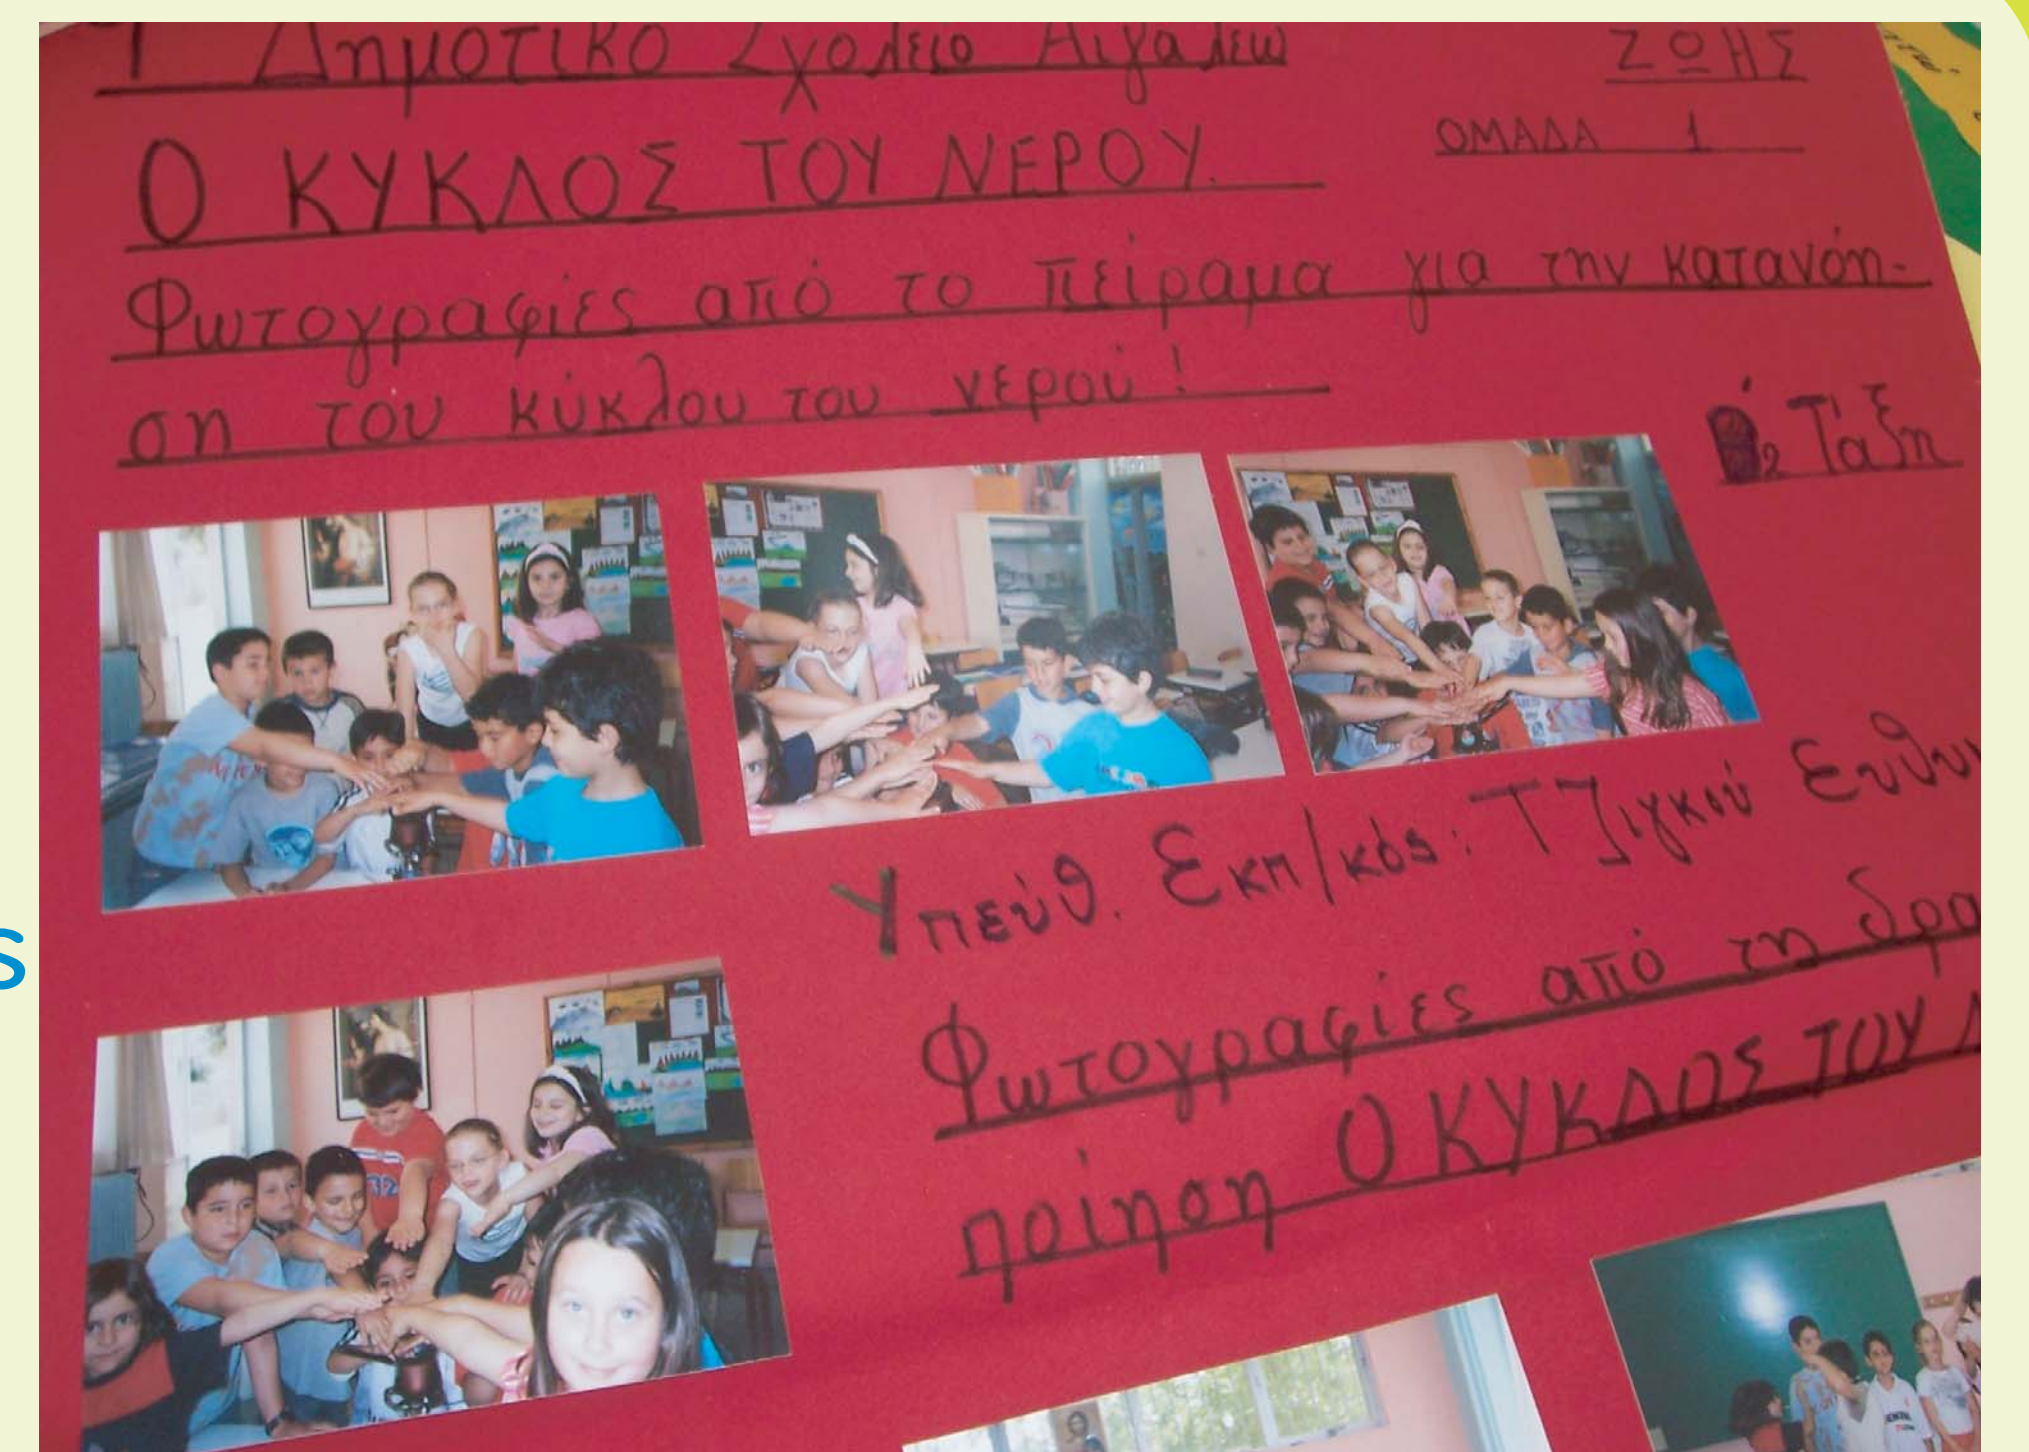

Working together, teachers, parents and pupils decided that they would achieve an A rating for energy consumption, by changing the way everyone used energy in the school

Technical and financial support was needed, so the school obtained local business sponsorship and advice from key partners, such as the Municipality

Notices

Children put up posters and notices as reminders to switch off lights and open curtains to let in sunshine, and to open doors and windows to ventilate classrooms naturally

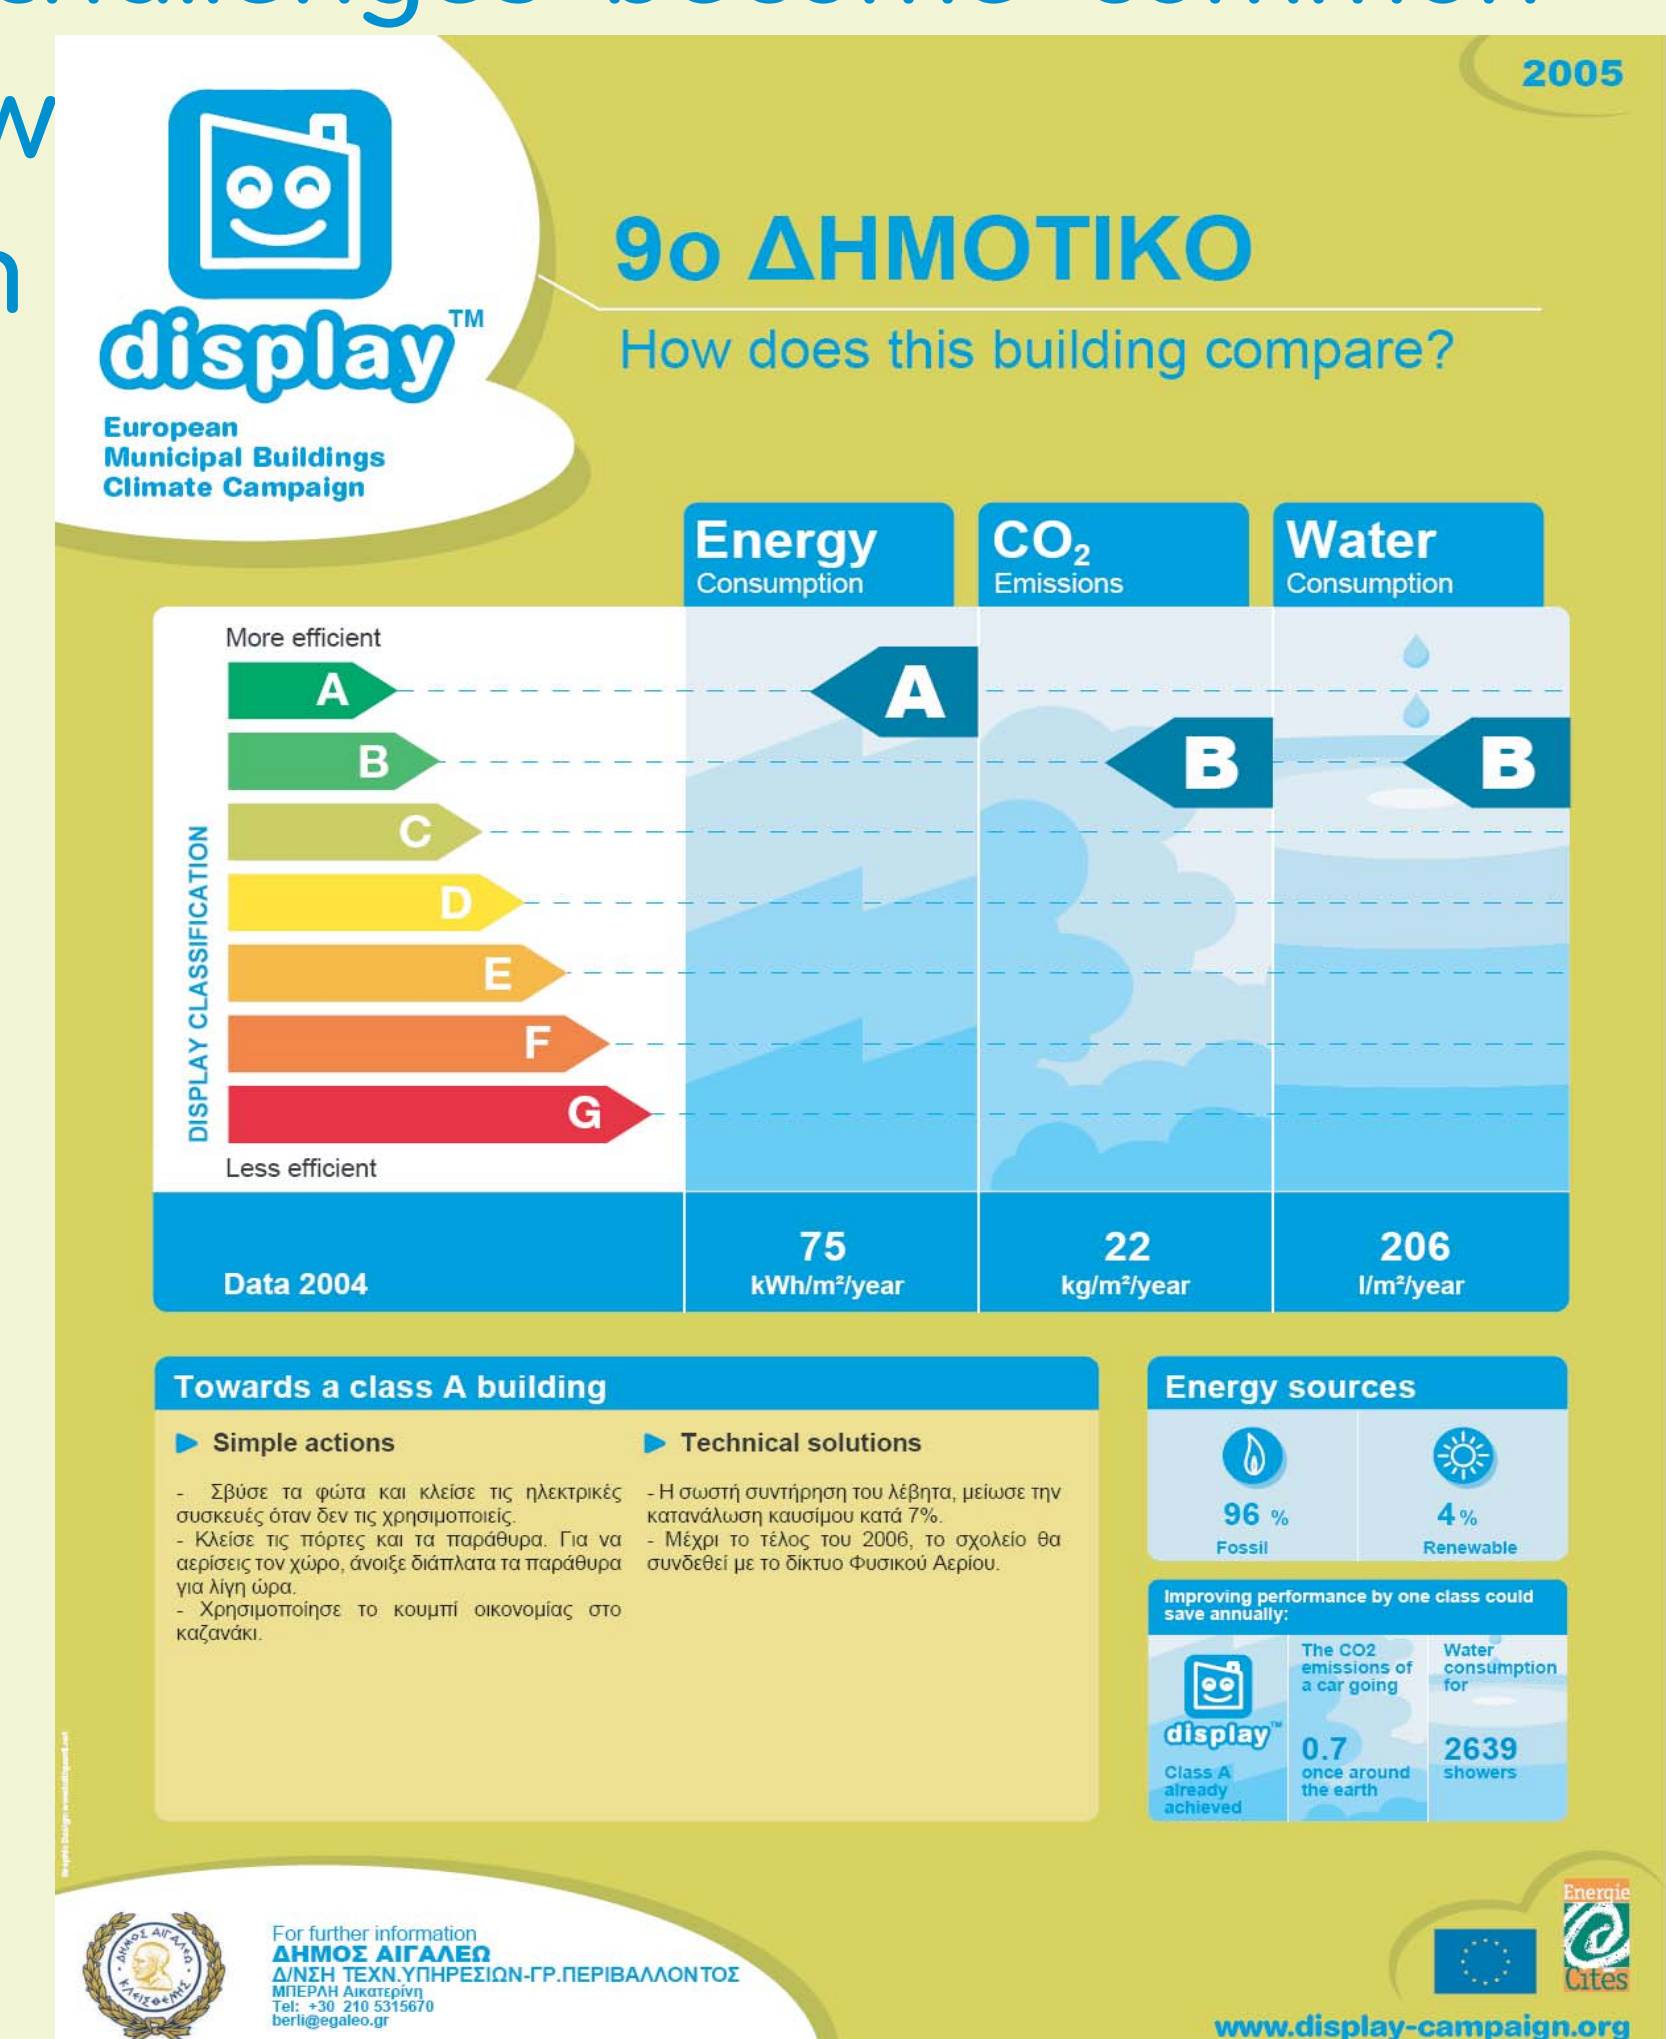

Buildings were also painted light colours so to reflect, rather than absorb solar radiation during the summer time

Success builds success!

Through the habitual undertaking of seemingly insignificant actions by all members of the school, the 9th Primary School was able to achieve an outstanding A Display rating for energy

With meeting such challenges become commonplace, the School now intends to achieve an A rating for water consumption

With further support from the local municipality, parents and interest groups, success is assured. Good Luck!
